

Zepto Sales Dataset – Data Cleaning Documentation

1. Document Goal

The goal of this project is to clean, validate, and prepare the Zepto Sales dataset for accurate sales analysis and dashboard development using Microsoft Excel.

2. Dataset Cleaning Process

- Reviewed the dataset structure and identified 1,500 order records with 22 columns.
- Checked for duplicate records; no duplicate rows were identified.
- Verified that all 1,500 Order IDs are unique.
- Checked missing values in important fields.
- Identified missing values in City (28 records) and Delivery_Time (244 records).
- Standardized categorical values, including payment methods with inconsistent capitalization.
- Verified numerical fields such as Quantity, Price, Discount, Tax, Delivery Fee, Surge Fee, and Sales.
- Checked numerical fields for invalid negative values; none were identified.
- Reviewed date, month, and day fields for consistency.
- Verified delivery statuses including Delivered, Cancelled, Failed, and Returned.
- Reviewed supporting KPI and report sheets for dashboard preparation.

3. Final Result

The cleaned dataset contains 1,500 unique orders with consistent numerical and categorical data. Data-quality issues such as missing values and inconsistent text formatting were identified and prepared for correction before analysis.

4. Outcome

- Sales and revenue analysis
- Product and category performance analysis
- Customer-segment analysis
- Payment-method analysis
- Delivery performance analysis
- KPI calculation
- Excel Pivot Tables and charts
- Interactive dashboard development
